How to enable your Internet Explorer browser for compatibility view if you do not see the select option

For Internet Explorer 10 users, if you do not see the “select option” when you select the class you wanted to add, you will have to enable your compatibility view in your Internet Explorer browser.

Steps:

1.) If you do not see your menu bar to enable the compatibility view, then put your cursor on the area below and right click to select “Menu Bar”. This will allow you to see the menu bar option.

2.) When you select the menu bar you will see a list of menu options. Select Tools and click on Compatibility View to enable your computer to make the add request.
3.) You should be able to make an add request after you updated your compatibility view.
